Final Project information:

Each day being late will result in a 10% penalty.

 • The final project is about implementing your work in project 1 to generate the Neo4j Graph Data Model.

• You must convert the designed schema and all the simple and advanced queries. In addition to converting all the queries, updating and deleting commands to be used in Neo4j.

• Please use Neo4j and work in the group to complete this project worth 20% of the total course grade and will be evaluated through your written submission in the BB.

• You will submit the Cypher Query Language commands with screenshots that show the commands correctly running with the output results. Also, you must submit the exported SVG file of your database.

• You will find following link useful for exporting:

https://neo4j.com/docs/browser-manual/current/operations/export-results/

• This project required you to install the Neo4j Desktop application from the following link: https://neo4j.com/download/
